4065. Update Manifest Information (Collective Change of CY)

Procedure Code	Procedure Name
CMC	Update Manifest Information (Collective Change of CY)

1. Procedure Outline

    Change collectively the Container Operator Code of the registered Cargo Manifest information, for each carrier using the ship.

    Note that this procedure can be done until the "Manifest Submission (DMF)" procedure.

2. Implementer

    Carrier, Shipping Agent

3. Limits

    [1] The maximum number of container operators that can be specified for a single piece of vessel information[*1] (excluding the Carrier Code) is 5.

    If there are five registrations prior to the implementation of this procedure and the new container operator is not a registered container operators, the implementation will be disabled.

    (*1) Vessel information consists of the following 4 items (The same applies hereinafter).

    [1] Vessel Code
    [2] Carrier Code
    [3] Port of Discharge Code
    [4] Port of Discharge Suffix

4. Input Conditions

    (1) In the case of the CMC procedure

        (A) Implementer verification

            [1] The implementer is a user already registered in the system.

            [2] When the implementer is a Carrier, the Carrier must be for the cargo registered by the "Manifest Information Registration (MFR)" procedure.

            [3] When the implementer is a Shipping Agent, the consignment relationship with the carrier using the ship for the entered port of discharge is registered in the system.

        (B) Input field verification

            (a) Individual field verification

                See "List of Input Fields" and "System Design Specification for NACCS Online Procedures".

            (b) Data linkage verification

                See "List of Input Fields" and "System Design Specification for NACCS Online Procedures".

        (C) Manifest Management DB verification

            [1] The Manifest Management DB for the entered vessel information must be existed.

            [2] The DMF procedure for the entered vessel information is not performed.

            [3] The original Container Operator Code entered is registered in the Manifest Management DB for the vessel information entered.

        (D) Update Manifest Information (Collective Change of CY) Management DB verification

            This procedure is not performing the internal process for the entered vessel information.

        (E) Cargo Information DB and Container Information DB verification

            In the extraction processing of 5. (1) (C), at least one B/L or container to be processed exists.

5. Processing Details
   (1) CMC procedure
      (A) Input verification
         When the above-mentioned input conditions are satisfied, the Process Result Code "00000-0000-0000" should be set before proceeding to the steps that follow.
         When the above input conditions are not satisfied, which means an error, output the Process Result Output after setting a code other than "00000-0000-0000" in the Process Result Code. (For error details, see "List of Process Result Codes".)
      (B) Update Manifest Information (Collective Change of CY) Management DB process
         [1] Create the Update Manifest Information (Collective Change of CY) Management DB for the entered vessel information and the original Container Operator Code.
         [2] Register that internal processing is in progress by this procedure.
      (C) Cargo Information DB and Container Information DB process
         (a) Extraction processing of Cargo Information DB
            B/L satisfying all the following conditions is extracted from the Cargo Information DB.
            [1] The entered vessel information and the original Container Operator Code match.
            [2] Manifest information is registered.
         (b) Extraction processing of Container Information DB
            A container satisfying all the following conditions is extracted from a Container Information DB.
            [1] The entered vessel information and the original Container Operator Code match.
            [2] Manifest information is registered.
         (c) Extraction Processing of "Temporary Landing Vacant Container's Next Port Information" DB
            A container matching the entered vessel information and the original Container Operator Code is extracted from a "Temporary Landing Vacant Container's Next Port Information" DB.
      (D) Output process of output information
         Process the output information (described later). For details on the output field, see "List of Output Fields".
      (E) Internal process starting
         B/L or containers to be processed are divided into 20 items and internal processing (Update Manifest Information (Collective Change of CY) (accumulative processing)) is started.
      (F) Output process of warning message
         ("The internal process is performed") is output with the Process Result Output as a warning message.

(2) Internal process (Update Manifest Information (Collective Change of CY) (accumulative processing))

    (A) Manifest Management DB process

        The Container Operator Code is changed to the inputted vessel information.

    (B) Cargo Information DB process

        The cargo information for the extracted B/L is processed as follows.

        [1] Change the Container Operator Code.

        [2] When an MFR procedure, "Update Manifest Information (Before the Manifest Submission procedure) (CMF01)" procedure, "Manifest Addition Registration (MFA)" procedure or "Update Manifest Information (Adding Information on Next Port of Discharge) (CMF03)" procedure has also registered a Customs transit declaration on arrival, the declaration shall be revoked.

    (C) Container Information DB process

        The Container Operator Code is changed to the container information for the extracted container number.

    (D) "Temporary Landing Vacant Container's Next Port Information" DB process

        The Container Operator Code is changed to the temporary landing vacant container's next port information for the extracted container number.

    (E) Update Manifest Information (Collective Change of CY) Management DB process

        When the processing of all the extracted B/L and containers is completed, register "The internal process is completed".

    (F) Output process of output information

        Process the output information (described later). For details on the output field, see "List of Output Fields".

6. Output Information

(1) In the case of CMC procedure

Information Name	Output Conditions	Output Destination
Process Result Output	Nil	Implementer

(2) Internal process

Information Name	Output Conditions	Output Destination
Error Notification (Update Manifest Information (Collective Change of CY))	In the case of all extracted B/Ls and containers have been processed.	Implementer
Container Information Planned to be Declared Immediately after Arrival	In the case of processing B/L registered for Preliminary declaration of the deemed import immediately after arrival.	Container Operator Code
