
4009. Application for Cargo Discharge Permission

Procedure Code	Procedure Name
DNC	Application for Cargo Discharge Permission

1. Procedure Outline

Apply for permission to discharge cargo for the B/L to which ("SPD") is sent as the Prior Notification of Risk Assessment Result. DNC procedure divides the process into smaller processes and processes them internally. The internal processes register the Application for Cargo Discharge Permission.

2. Implementer

Carrier, Shipping Agent

3. Limits

The maximum number of B/Ls that can be entered in one procedure is 100.

4. Input Conditions

(1) Implementer verification

- [1] The implementer is a user already registered in the system.
- [2] If the implementer is a Carrier, the implementer is the user for the Carrier Code entered.
- [3] If the implementer is a Shipping Agent, the consignment relationship with the carrier using the ship is registered in the system in the port of discharge entered.

(2) Input field verification

(A) Individual field verification

See "List of Input Fields" and "System Design Specification for NACCS Online Procedures".

(B) Data linkage verification

See "List of Input Fields" and "System Design Specification for NACCS Online Procedures".

(3) Internal process

(A) Advance Cargo Information DB verification

If the "Advance Cargo Information Registration (AMR)" procedure or the "Update Registered Advance Cargo Information (CMR)" procedure is done for the B/L to be applied, check the following.

- [1] The input Vessel Code, Voyage Number, Carrier Code and Port of Discharge Code are registered.
- [2] The departure date is registered by the "Departure Time Registration (ATD)" procedure.
- [3] "SPD" is registered by the "Completion of Screening & Prior Notification (CDN01)" procedure.
- [4] DNC procedure did not apply for the Application for Cargo Discharge Permission.

(B) Cargo Information DB verification

Check the following if the AMR procedure or CMR procedure is not done for the B/L to be applied.

- [1] The B/L to be applied is registered in the Cargo Information DB.
- [2] The input Vessel Code, Carrier Code and Port of Discharge Code entered are registered.
- [3] The B/L to be applied is registered as "New B/L Number" by "Association of Registered B/L Numbers (BLL)" procedure.

- [4] "SPD" is registered by the "Completion of Screening & Prior Notification (CDN01)" procedure.
- [5] Application for Cargo Discharge Permission by DNC procedure has not been done for the B/L to be applied.

5. Processing Details

(1) DNC procedure

(A) Input data verification

If the above-mentioned input conditions are met, the Process Result Code "00000-0000-0000" should be set before proceeding to the steps that follow.

If the above input conditions are not satisfied, which means an error, output the Process Result Output after setting a code other than "00000-0000-0000" in the Process Result Code. (For error details, see "List of Process Result Codes".)

(B) Application forwarding public office determination process

The customs station office that controls the port of discharge is the office to which the application is sent.

(C) Application for Cargo Discharge Permission Number issuing process

The system issues the Application for Cargo Discharge Permission number.

(D) Application for Cargo Discharge Permission DB process

Register the Application for Cargo Discharge Permission Number and the entered information issued by the system.

(E) Output process of output information

Process the output information (described later). For details on the output field, see "List of Output Fields".

(F) Internal procedure starting process

Divide the process into smaller processes, and process them internally.

(G) Output process of warning message

Output ("An internal process is being done") as a warning message to the Process Result Output.

(2) Internal process

(A) Input verification

If the above-mentioned input conditions are met, do the following processes.

If the above input conditions are not satisfied, which means an error, output the Process Result Output after setting a code other than "00000-0000-0000" in the Process Result Code. (For error details, see "List of Process Result Codes".)

(B) Advance Cargo Information DB process

Register the Application for Cargo Discharge Permission information for the B/L to be applied if the AMR procedure or CMR procedure is performed.

(C) Cargo Information DB process

If "SPD" is registered for the B/L to be applied, register the Application for Cargo Discharge Permission information.

(D) Application for Cargo Discharge Permission DB process

Register the B/L for which the discharge permit is applied.

(E) Output process of output information

Process the output information (described later). For details of output field, see "List of Output Fields".

6. Output Information

(1) DNC procedure

Information Name	Output Conditions	Output Destination
Process Result Output	Nil	Implementer

(2) Internal process

Information Name	Output Conditions	Output Destination
Error Notification Information (Application for Cargo Discharge Permission)	Nil	Implementer
Application for Cargo Discharge Permission – Copy Information	Nil	Implementer
	The Notification Forwarding Party is registered by the DNC procedure	Registered Notification Forwarding Party
	Nil	Customs Station
Advance Cargo Information Registration		Customs Station

7. Special Notes

(1) Correction of the application contents

The contents applied by DNC procedure cannot be corrected. If they need to be corrected, perform DNC procedure again after either of the following is done by the customs station.

[1] Requirement Notice for Re-application by "Selectivity Completion for Applied Cargo Discharge Permission (CDE01)" procedure.

[2] Withdrawal of the Application for Cargo Discharge Permission

(2) Required re-application

When the customs station examines the application and finds inadequacy in the Application for Cargo Discharge Permission, "Re-application is required" is registered. If the re-application is required, the implementer must check the B/L and application contents, correct the contents and perform DNC procedure again.
